Three facts you should know:

1. Ethanol is pro-environment. "I believe in ethanol. I believe ethanol is good for the quality of the air, I believe ethanol is important for the agricultural sector of our economy."
President George W. Bush

2. Ethanol benefits rural development and agriculture. "[T]he state needs to continue its promotion of ethanol production to help provide a new market and increased prices for farmers producing corn..."
Governor Jim Doyle

3. Ethanol will not decrease property values. "As statutory assessor for the village, it is my opinion that an ethanol plant would have little affect on property value throughout the village."
Jim Danielson, Village Assessor

Ethanol. Yes.

Dear Community Neighbor,

People in and around our village are carefully weighing the benefits of bringing ethanol production to Cambria. There's a lot at stake for both village residents and the farmers in surrounding townships, so your participation in the process is important -- and welcome.

We are committed to getting you the facts you need to make an informed decision on the ethanol project. We will send our community neighbors regular updates about the project. An environmental assessment report is nearly complete and will be shared with the public. The report will answer many of the questions you may have.

In the meantime, we want to hear from you. If you have questions, comments, or concerns about ethanol production, the plant proposal, or the ongoing operations of the mill, please let us know. We'll give your comments and questions top priority. We want to address your concerns as our planning continues.

All of us here at Didion Milling appreciate your support over the past twelve years. We want the next twelve years to be even better.

Sincerely,

Dale Drachenberg

Dow Didion
